SKYCREW — A fleet of camera drones. One operator. Cinema shots for your wedding.

Replace a 15-person camera crew with a swarm of smart drones that swing to crane angles the moment a guest speaks into a microphone pod at their seat.

DEMO — "One person, fifteen cameras" • 2:41

[CAMPAIGN LIVE](#)[INDOOR-SAFE](#)[OPEN HARDWARE CORE](#)[MODULAR](#)[HOT-SWAP BATTERIES](#)

How it works

Small mic-and-button pods sit at each seat of the head table. When a guest speaks into a pod — or taps the button — SKYCREW sends the nearest free drone to that seat's pre-programmed camera angle: orbit, crane rise, close-up, low-angle. Press again, and the shot happens.

Every angle, flight path and focus point is mapped before the event with a venue profile, so the drones move like a choreographed crew — never wandering, never in the way.

15 CAMERA ANGLES	1 OPERATOR	~100ms VIDEO LATENCY	8h COVERAGE W/ HOT-SWAP
----------------------------	----------------------	--------------------------------	-----------------------------------

Two sizes. One system.

- ▶ **Sparrow** — the smallest drone that still shoots beautiful video. Enclosed props, indoor-safe, rides an action camera. From ~\$1,500/kit.
- ▶ **Condor** — the heavy lifter. Carries a full cinema camera (Blackmagic Pocket 6K / Sony FX3) on a 3-axis gimbal for weddings and concerts. From ~\$9,000/kit.
- ▶ **Modular everything** — add drones, add pods, add anchors, add streaming. One system grows with you.

Battery, handled

Each drone hot-swaps batteries in seconds. The station alerts you when one is low; tap to recall it, or let the failsafe land it on its pad automatically at a safe threshold — even if you're mid-toast.

The stretch: guest spotlight shots

Hosts set a price and a length. Guests scan a QR at their seat, pick a time slot, and pay — a gift to the couple, or straight toward the honeymoon fund. At their slot the nearest drone swings in, an ON AIR ring lights up, and they get a guaranteed minute in the final film. The film helps pay for itself, and every guest who books is in the cut.

Higher tiers let guests record a **video-wall message** (hosts review everything before it airs), **pay to play their song** through the DJ or PA, or book a full **karaoke performance** on the big screen — the biggest gift slot of the night.

The stretch: design your own shots

Backers unlock the venue-planning webapp — a satellite-style 3D view of your venue where you draw flight paths, pick angles and set focus points, then see what each shot will look like. The photographer reviews, suggests better ideas, you confirm. Your wedding, your shot list.

Safety first

- ▶ Enclosed prop guards + hard geofence (ceiling, venue polygon).
- ▶ Failsafe cascade: GCS loss → battery → geofence → auto-land on pad.
- ▶ Operator training + certification for every kit sold.
- ▶ Layered liability & hull insurance included on pilot units.

Stretch goals

\$150K

Venue planner alpha

Webapp where clients design their shot list in 3D.

\$250K

Indoor UWB pack

Anchors bundled on every drone kit. Cinematic shots inside the ballroom.

\$350K

Live stream + video wall

Remote guests attend in real time; glass-clink to speak from a video wall. In-venue sight-line feeds for bad seats.

\$450K

Fund-a-Guest

Guests pay for their moment: a guaranteed talking head in the film, a host-reviewed video-wall message, a song on the DJ, or karaoke on the big screen.

\$500K

Custom carbon airframe

SKYCREW-designed frame, lighter and stronger than COTS.

\$750K

Hydrogen v2

Fuel-cell R&D for 2.5-hour single-aircraft endurance.

FAQ

▼ Is this legal to fly at events?

Yes, with the right operator. Every SKYCREW unit ships with a certification path: FAA Part 107 (or regional equivalent), a SKYCREW safety course, and no-fly-over-crowd SOPs. Drones fly around, not over, guests, with enclosed props and hard geofences.

▶ How does it know where to fly indoors?

► What happens if a battery gets low and I’m busy?

► What cameras does it carry?

► Can a backer rent instead of buy?

► When do I get mine?
