

SkyCue – Gemini Visual Asset Prompts

Brand: **SkyCue** ("a camera crew that lives in the sky"). Product line: **CuTTo** software, **Halcyon** package, **Vantage** + **Meridian** drones, **LUMIÈRE** video-wall/live-stream.

How to use

- **Stills** (logo, drones, storyboard, montage, schematics, thumbs-up) → Gemini image generation (Imagen). Prepend the **STYLE BLOCK** to every prompt, then the asset prompt.
- **Motion** (CuTTo screen animation, reception animation) → **Veo 3** (video). Gemini will usually route to it automatically; if it returns a still, ask explicitly for video.
- **Text in images is unreliable** for image models. Use the prompts to explore concepts, then rebuild the final **SkyCue wordmark in vector** (Illustrator/Figma) and composite over the chosen mark.
- A "GIF" from Veo = a short clip (4–8s). Render it, then convert to GIF (or use the clip directly in the campaign video).
- Suggest aspect ratios: logo grid `1:1`, drones `3:4` or `16:9`, storyboard `16:9`, CuTTo video `16:9`, thumbs-up `3:4`, montage set `16:9`.

STYLE BLOCK – prepend to every prompt

> **Style & brand lockup.** SkyCue: a camera crew that lives in the sky. Premium, cinematic, aspirational. Color palette: deep navy / slate charcoal, warm champagne-gold accents, soft ivory highlights. Lighting: warm golden-hour ambience, soft bokeh, gentle film grain, cinematic depth. Feel: quiet luxury meets aerospace precision – trustworthy tech, not sci-fi gimmick. Photorealistic, high detail, professional production quality. RULES: no text, no words, no logos, no watermarks (unless the asset is a logo). No stiff posed smiles – candid, natural, joyful. People look happy and alive, never like stock-model ads.

1. Logo – SkyCue wordmark (4 concepts)

- > **Logo concept set.** Four distinct concepts for the wordmark "SkyCue", presented in a clean 2x2 grid, each on a solid deep-navy background, one champagne-gold accent color, elegant geometric sans-serif typography – "SKY" in a lighter weight, "CUE" in bold, the "C" always capitalized (the brand formats it as SKY/CUE).
- > **Concept A – "Cue Light":** a minimal circular mark like a camera iris/aperture whose ring is split open at 2 o'clock, a small warm light flare where the gap is – reads as a cue light ready to fire.
- > **Concept B – "Flight Arc":** a thin gold flight-path arc sweeping up and off the right edge ending in a soft motion-streak dot, like a drone trajectory.
- > **Concept C – "The C":** a large rounded "C" glyph whose tail finishes as a subtle lens-flare sweep – cue + camera in one letter.
- > **Concept D – "Aperture Pod":** a round trigger-pod seen face-on, rendered as a camera aperture ring with a warm center light.
- > Show each concept as: full-color wordmark + mark alone + reversed mono version.

2. Drone family mockups

- > **Product mockup – drone family, two models.** On a seamless studio sweep with warm rim light, photorealistic.
- > **LEFT – "Vantage" (compact):** a palm-sized, cinewhoop-class camera drone with fully enclosed propeller ducts, matte charcoal shell, small stabilized 4K camera under a glass dome, a single gold accent stripe, zero visible wires. Safe, friendly, small enough to hold in one hand.
- > **RIGHT – "Meridian" (professional):** a larger carbon-fiber camera drone, visible unibody carbon weave, retractable landing gear, professional gimbal-mounted camera (mirrorless-class), modular payload nose, cooling vents, gold accent line, a subtle "M" silhouette molded into the top shell. Built, precise, aerospace-grade.
- > Then one in-flight hero: **Meridian climbing at golden hour over a vineyard**, backlit, lens flare, deep bokeh.

3. Storyboard – couple plans their aisle shot

> ****Storyboard, 5 panels, film style, read left to right, no text.**** Consistent cast: an engaged couple, late 20s, relaxed and warm. Cinematic grade, warm light.

> ****P1 – Planning:**** the couple and a planner lean over a laptop at an elegant table; on screen an overhead map of an aisle is visible; a finger traces a curved gold line.

> ****P2 – The map (top-down):**** outdoor wedding aisle with 4 rows of chairs on each side and a flower arch at the far end; a glowing gold flight path arcs down the aisle, a small drone glyph rides the line, a soft camera-angle cone fans toward the couple.

> ****P3 – The walk:**** the couple walking down the aisle from behind, laughing; a small drone hovers above and to the side at head height, a faint gold path trailing it, clearly out of sight-line.

> ****P4 – The moment:**** the couple at the arch mid-ceremony; three small drones hover at different heights and angles in the bokeh, quiet and unobtrusive.

> ****P5 – The result:**** that evening, the couple watching footage on a tablet, eyes bright, the drone resting on its landing pad beside them.

4. CuTTo software – flight-path editor (VIDEO / Veo)

> ****Video, 8 seconds, loopable, clean UI, navy + gold, no readable text – icons and shapes only.****

> Top-down orthographic map of an outdoor wedding aisle: 4 rows of chairs on each side, flower arch, aisle runner, hedges, rendered as a clean 3D site plan.

> Action: the operator drags waypoints; a smooth gold flight path draws itself down the aisle with glowing waypoints and a small drone marker sliding along it; speed/height arcs animate subtly.

> Picture-in-picture (upper right of the same screen): a live simulated camera view from the drone's position along the path – rising crane height, pulling back, showing the couple's walking line – clearly a render of the same venue.

> Subtle UI chrome: a left panel of shot cards, a bottom timeline. No readable text.

5. Photographer thumbs-up

> ****Photo.**** A professional photographer, mid-40s, relaxed, beaming, giving a big confident thumbs-up straight at camera. Behind them a work desk and gear wall: camera bodies, lenses, three neat carbon drones on shelves, a laptop showing a colorful overhead site plan, warm string lights, golden-hour window light. Candid joy, not staged. No text.

6. Wedding reception – drone coverage (VIDEO / Veo)

> ****Video, 8-10 seconds.**** Warm golden-hour outdoor wedding reception: marquee string lights, long tables, guests eating, laughing, toasting, unscripted energy.

> The couple's first dance under string lights; two or three small drones hover high around the perimeter, barely noticeable, each trailing a faint gold light.

> Quick montage: drone low over the cake, drone rising above a dance floor, drone drifting past a table where a guest cheers with a raised glass.

> Final frame: the venue skyline at dusk, three small glowing drone lights dotting the air above the party. No text.

7. Industrial design schematics – Meridian (higher tier)

> ****Technical schematic.**** Exploded-view hardware blueprint of the professional drone, engineering style: deep-navy background, crisp white/gold linework, orthographic top/side/front views, dimension lines and measurement ticks, numbered leader callouts pointing to components (rotor assembly, gimbal payload, UWB module, battery bay, flight controller, antennas, prop guards). Precise aerospace-drafting aesthetic. Text only as tiny technical numbers – no brand names.

8. Expansiveness montage – one image per market, no words

> ****Campaign image set, unified style (cinematic, golden, no text):****

> ****A – Venue:**** grand hotel ballroom; at a concierge podium a venue manager hands a photographer a tablet showing a glowing floor-plan layout; behind them a reception is in full swing with a drone drifting overhead. **(venue-API licensing angle)**

> ****B – School:**** high-school graduation on a stadium field, caps in the air, a small drone hovering at the edge capturing the wide shot; in a corner a media-class student holds a controller with a smile. **(theater, graduation, media class)**

> ****C – Sports/broadcast:**** a basketball arena, a drone tracking a fast break from a low corner angle, broadcast-camera energy.

> ****D – Extreme sports:**** a skateboarder launching out of a bowl at sunset, a compact drone matching their line inches behind; a second shot of a snowboarder carving powder, drone shadow skimming the snow.

> ****E – Creator:**** a YouTuber on a rooftop with a minimal rig, hot-swapping a battery pack on a small drone between takes, phone on a tripod behind them. **(swapable batteries = endless shots in one area, no camera crew)**

> ****F – One operator, many angles:**** a single photographer seated with one tablet, surrounded by a fan of 6-8 hovering drones at various heights – the entire pitch in one image.

> ****G – The comparison:**** split-frame – left, one calm operator with a tablet and a tiny drone; right, a sprawling 15-person camera crew with cables and cranes. Same shot outcome. **(the value story without words)**

> ****H – Funded future:**** a moonlit city park at night, a dozen faint gold drone-light trails arcing over a crowd – a network of venues and operators, what the campaign unlocks.

Campaign-narrative arc (order to present them)

1. Drone family mockups (Vantage + Meridian) – the hardware.
2. Storyboard P1-P5 – the couple's aisle shot, the emotional hook.
3. CuTTo software video – the technology (preproduction + flight path + simulated angle).
4. Photographer thumbs-up – the operator's relief and extra income.
5. Reception video – the atmosphere.
6. Meridian schematics – the higher-tier engineering credibility.
7. Expansiveness montage A-H – the scale of what funding unlocks (venue licensing, venues owning hardware, schools, sports, extreme sports, creators, one-operator-many-angles, funded future).

Note on the pitch

The drone itself is "a drone that flies a path" – commodity. The visuals must sell what surrounds it: ****the operator's reduced workload, the added revenue, and the network effect after funding****. Keep the drone quiet and graceful in every shot (hovering in bokeh, never the hero of a scene unless it's the product mockup or schematic); the heroes are the couple, the photographer's relief, and the scale of use cases.
